

ABSTRACT OF THE DISCLOSURE

A method, apparatus, and article of manufacture of the invention provide for collapsing a dialog window of an application. A complete dialog window of a currently active application is displayed on a display device. A location of a cursor with respect to the dialog window is determined. A collapsed version of the dialog window is displayed when the cursor moves outside of the complete dialog window, wherein the collapsed version of the dialog window consumes a smaller area of the display device than the complete dialog window. A complete version of the dialog window is displayed when the cursor moves within the collapsed version of the dialog window.
